

REMARKS

The Examiner indicates in the disposition of claims that claims 1-41 are pending and that claims 29-41 are allowed and that claims 1-28 are objected to.

It is apparent that the Examiner has not considered the Preliminary Amendment of April 12, 2004, a copy of which is enclosed including a postcard receipt which is clearly reflected although partially obscured by the Patent Office Mail Room stamp of April 12, 2004.

It is requested that the Examiner forthwith issue an Office Action regarding claims 42-43 which were added by the enclosed Preliminary Amendment as originally filed with the application papers on April 12, 2004.

Early allowance thereof is respectfully requested.

To the extent necessary, Applicants petition for an extension of time under 37 C.F.R. §1.136. Please charge any shortage in fees due in connection with the filing of this paper, including extension of time fees, to Deposit Account No. 01-2135 (1312.35259CC2) and please credit any excess fees to such Deposit Account.

Respectfully submitted,

LISTING OF THE CLAIMS:

Claims 1-41 (Cancelled).

42. (New) A seed planter comprising:

a frame having a plurality of wheels for rolling over a surface of ground to be planted with seed;

a seed container for containing seed to be planted in the ground;

a support which is joined to the frame and to the seed container to transfer weight of the seed container to the frame, the support including weight sensing devices which sense a weight of the seed container and any seed transferred through the support to the frame and providing an output of sensed weight; and

a display, coupled to the output, for displaying the weight of the seed contained in the seed container; and wherein

the weight sensing devices comprise load cells for being loaded with weight of the seed transferred from the seed hopper through the load cells to the frame.

43. (New) A method for modifying a seed planter having a frame having a plurality of wheels for rolling over a surface of ground to be planted with seed and a seed container joined to the frame for containing the seed to be planted comprising:

separating the seed container from being joined to the frame;

positioning a support between the seed container and the frame to join the support to the frame and to the seed container, the positioned support transferring

weight of the seed container to the frame and including weight sensing devices which sense a weight of the seed container and any seed in the seed container transferred through the support to the frame and which provides an output of the sensed weight; and

providing a display on the seed planter for displaying the weight of the seed contained in the seed container; and wherein

the weight sensing devices comprise load cells for being loaded with weight transferred from the seed hopper through the load cells to the frame.
